Spider

Dyad's Spider system allows an insurance wholesaler to receive multiple quotations from different carriers with the click of a button. Spider achieves this by sending data from a single application for a particular risk to multiple carrier websites with which the wholesaler has a working relationship.

Spider improves efficiency and connectivity in quoting for all types of insurance organizations. A core component of the system is a data feeder that fuels Spider's engine to obtain quotes from multiple carriers without the need for time-consuming individual interactions with carrier websites.

Benefits of SPIDER

Wholesalers can derive a host of benefits from SPIDER, including:

> One-time data entry

> User-defined rules for doing business with different carriers

> Real-time quoting from multiple carriers who are not API enabled.

> Easy integration with other systems

> Reduce time and cost by enabling straight-through processing

Can handle any line of business, including:

> Auto Liability

> Motor Truck Cargo

> Physical Damage

> Auto General Liability
