

Nexsure Data Warehouse

Build Your Data Foundation with Nexsure Data Warehouse

Are you looking to extract data for usage outside of the Nexsure Insurance Platform?

If yes, the Nexsure Data Warehouse provides a centralized data store of information generated by your organization's staff through their use of the Nexsure Insurance Platform.

The Nexsure Data Warehouse is separate from the production (or transactional) database facilitating more efficient access to the data for analytics, reporting, data integrations, and ad hoc queries. The accessible data includes organizational information, as well as data from the general ledger, employees, carriers, retail agents, insured, policies and financial transactions.

As an option, customers may elect to **add direct access to their data warehouse** via a Virtual Private Network (VPN).

The Nexsure Data Warehouse provides for the use of your preferred reporting tools to access the data store to create dashboards and custom reports. Running reports against the Nexsure Data Warehouse greatly enhances performance and reduces the impact to the production (or transactional) database. On a periodic basis, an ETL (Extract, Transform, Load) process will take place in which your data is moved from the production database to its respective data warehouse. Data transfers typically run every 24 hours, but customized ETL processes are supported and can be adjusted as needed.

Benefits of the Nexsure Data Warehouse:

- Ability to Produce Data Analytics, Custom Reports, Dashboards, and More
- Core Entity and Financial Data is Accessible
- Ability to Use Your Preferred Reporting Tools to Access and Model Data
- Off-Loads Resource Intensive Reporting from the Production/ Transactional Database
- Faster Reporting Performance Inherent with a Data Model Designed Specifically for Reporting (vs. Transactional Processing)
- Ability to Perform Data Extractions to Populate Other Systems or External Data Sources
- Periodic, Customizable ETL Process for Updates

ABOUT US

Dyad delivers software and services that simplify insurance processing and distribution. We have redefined insurance technology by continuously improving our solutions, ensuring our customers can focus on growing and evolving their business, delivering superior customer service, and implementing insightful business management. Retail agencies, wholesalers, agency networks, program administrators, MGAs, and carriers benefit from our solutions.
