

Nexsure Enterprise Application Integration: Public API

Access and Modify Data from Nexsure

As an extension of the Nexsure Insurance Platform, Dyad has developed an application programming interface (API) that facilitates the sharing and synchronization of data between Nexsure and third-party systems, applications and environments.

With Enterprise Application Integration (EAI), Nexsure can efficiently interact and exchange information with other systems. Examples include adding leads that are created in an external component; searching, adding or updating client information from an external CRM; initiating the viewing, creating and servicing of policies from an external portal; as well as adding, viewing and updating invoices based on activity in an external billing system. Other scenarios are supported as well.

EAI is offered as a **subscription service** on an annual basis. The license cost includes **initial training**, three hours of **development support**, and the first **100K transactions** per month.

Nexsure EAI is based on open standards such as HTTP protocol, OAuth2 authentication, XML or JSON payloads, so cross-platform compatibility is built in. Customers can create multiple API keys with customized functionality to support different integration scenarios.

In addition, our public API includes IP address security, unique credentials for each API key, and optional user impersonation for when you need data changes attributed to a specific Nexsure user. Our API Documentation is available on our [developer portal](#).*

*Anyone can create a free account to access our developer portal.

A modern insurance platform to manage and grow your business.

- Public API Based on Open Standards
- Supports an Unlimited Number of Integrations with Unique Parameters for Each IP Whitelisting for Extra Security
- Access to a Library of 70+ Functions
- Webhook Support for Key Events Such as Adding
- A New Policy or Changing a Client Record

ABOUT US

Dyad delivers software and services that simplify insurance processing and distribution. We have redefined insurance technology by continuously improving our solutions, ensuring our customers can focus on growing and evolving their business, delivering superior customer service, and implementing insightful business management. Retail agencies, wholesalers, agency networks, program administrators, MGAs, and carriers benefit from our solutions.
