ACE-HUB

Connect and Communicate with Carriers

The ability for real time quoting, rating, binding and communication between carriers and their distribution partners has become paramount to success in today's market.

Dyad's ACE-HUB is a proprietary, cloud-based single connection point for multi-carrier data exchange that connects carrier markets to their distribution partners via API for quoting, binding, issuance, and retrieving latest version of quote. ACE-HUB's communication protocol enables MGAs and wholesalers to enter minimal information and immediately get back:

> Accurate, real-time rates for any line of business

> Updated mandatory and optional forms

> Minimum premium details by class and coverage level

> Underwriting guidelines and rules

> Messages specific to the request and delegated authority, such as bind, submit, or refer to underwriting

Benefits of using ACE-HUB

MGAs and wholesalers no longer have to enter data into multiple carrier systems. ACE-HUB lets you enter data into your own system and feed it to all your carriers instantly. MGAs and wholesalers no longer need to worry about receiving the most up-to-date rates, forms, or guidelines. ACE-HUB brings the latest data to your fingertips. Access also can be extended to your retail agents on a custom-built portal.

The opportunities to adapt ACE-HUB to fetch additional types of data are limitless. For example, add-on functionality includes additional or optional coverages, additional lines of property and casualty business, loss runs, quote, bind, and issue policies, and claim details.

Come discover how Dyad's ACE-HUB can make a difference for you in delivering the right data on demand.
